What i am curious about: Is it proven to just smoke the banana skins after drying out will be effective of do you have to do the nonpolar/polar extraction with ether and alachol? in one of the extraction method it says put 1/3 bananadine per 2/3 bakeing soda(now who can actually have pure bananadine? or does this mean the peals?), I am wondering if you also have to do the other extraction method before doing this one or are you able to just get the peals, scrape them, put 1/2 per 2/3bakeing soda in low boiling water, and stir(stir continusualy?, or can u just let it sit?) untill a crack like substance comes into form? approximently how many bannana peel shavings would you have to have in order to get onself high? Sorry for another question about the same thing you have probely heard

alli buy boots

So I'm a bit leery of unlimited booze (leaving aside it being a 'free' benefit I'd be paying for with my ticket, like the mass of the guy that weighs double what I do and still gets the same suitcase allowance).
