What i am curious about: Is it proven to just smoke the banana skins after drying out will be effective of do you have to do the nonpolar/polar extraction with ether and alachol? in one of the extraction method it says put 1/3 bananadine per 2/3 bakeing soda(now who can actually have pure bananadine? or does this mean the peals?), I am wondering if you also have to do the other extraction method before doing this one or are you able to just get the peals, scrape them, put 1/2 per 2/3bakeing soda in low boiling water, and stir(stir continusualy?, or can u just let it sit?) untill a crack like substance comes into form? approximently how many bannana peel shavings would you have to have in order to get onself high? Sorry for another question about the same thing you have probely heard

As Greg's first novel in that trilogy came out in 2010, he had a lot of questions before we had answers: what did the Prometheans look like? What did the living, breathing Forerunner civilization feel like? So between 2008 and 2010 our artists, designers, and writers met repeatedly with Bear to give him character sketches, talk about physics, shapes and characters that would ultimately take their first tentative steps in his book before coming to life on Requiem.
